Yusuf Bektas

GAME DEVELOPER

agolho@gmail.com | +90 541 274 2545 | İzmit, Türkiye
linkedin.com/in/yusufbektas | github.com/agolho

CORE SKILLS

LANGUAGES & ENGINES

Unity | C# | Swift (Xcode) | Kotlin/Java

AI & WORKFLOWS

Claude | Antigravity | Rapid Prototyping | AI-Assisted Coding

ARCHITECTURE & SDKS

OOP Patterns | AppLovin Max | GameAnalytics | AppsFlyer

WEB & WEB3

Next.js | Node.js | Solana | Solidity

EDUCATION

BS, Mathematics and Computer Science
Afyon Kocatepe Üniversitesi

BA, English Language and Literature
Kocaeli Üniversitesi

Full Stack Web Development
Free Code Camp

Pedagogical Formation
Kocaeli Üniversitesi

LANGUAGES

Turkish (Native) | English (Professional) | French (Basic) | Russian (Basic)

SUMMARY

Software engineer focused on game development, state management, and audit compliance. Currently developing recall audit components for cabinet video slot ecosystems. Prior experience includes full-cycle solo development and publishing using Unity and C#. Over the last 12 months, I have implemented AI-first development workflows and trained incoming engineers on utilizing AI tools for code generation and review.

EXPERIENCE

Frontend Developer (Game Systems) | Dreidel Interactive — May 2024 – Present

- Architected and implemented critical game recall systems and compliance audit modules for cabinet video slot machines, ensuring rigorous adherence to global gaming regulations and dispute resolution standards.
- Pioneered an AI-first development culture within the engineering team, leveraging Claude and Antigravity over the past year to accelerate rapid prototyping, code generation, and complex debugging.
- Mentored and onboarded cross-functional peer engineers onto AI-assisted coding workflows, resulting in significantly faster iteration cycles and highly modular, maintainable code architectures.

Game Developer | On Off Games — Apr 2022 – May 2024

- Led the development and technical architecture of over 40 Unity (C#) mobile projects, spanning hybrid-casual, puzzle, and idle arcade game genres.
- Ensured code maintainability and team-wide scalability by rigorously applying Object-Oriented Programming (OOP) and modern software design patterns.
- Integrated critical third-party SDKs, including Mediation (AppLovin Max, Google Ads), Analytics (GameAnalytics, Adjust, AppsFlyer), and Marketing functionalities to optimize user acquisition.
- Developed native application bridges and components utilizing Xcode (Swift) and Android Studio (Kotlin, Java) to maximize cross-platform performance.
- Managed end-to-end application delivery pipelines across Google Play Store Developer Console and Apple App Store Connect.

Solo Game Developer | Self-Employed — Jun 2015 – Feb 2019

- Designed, developed, and successfully published multiple standalone hyper-casual titles on iOS and Android platforms utilizing the Unity Engine.
- Managed full-cycle solo production, balancing game mechanics, UI/UX graphic design, performance optimization, and App Store Optimization (ASO) strategies to drive organic downloads.
